FOREWORD

The Office of Aerospace Research is acutely aware of the urgent need to expedite the exchange of scientific and technical information within the DoD and between DoD elements and the scientific community. Personal contact has long been one of the best media for such interchange. In certain cases, this is all that is needed. But in other cases, in view of the rapidly increasing quantity of information, personal contact is not enough to meet the requirements for effective communication.

The publication of this index is an additional attempt to accelerate the interchange of scientific and technical information between scientist and scientist, and between the researcher and the user. It can hardly begin to relate the story of OAR research, both past and present. But it is a part of that story, presented in the continuing tradition of making available to all who can use them the results of OAR research efforts. We hope that you will find it useful.

INTRODUCTION

The OAR Cumulative Index of Research Results, 1959-1962 is designed:

- to identify all technical reports produced and published by the various organizations within the Office of Aerospace Research from January 1959 through December 1962.
- to provide a record of the results of research conducted and sponsored by each OAR organization during this same period.
- to furnish a ready reference for the identification of technical reports produced by particular authors or contractors, or under certain contracts, grants or projects.

Previously, OAR had published the OAR Index of Research Results, a quarterly which was discontinued with the July-September 1962 issue. This present OAR Cumulative Index not only includes the remaining three months of 1962, but also provides a retrospective reference for the preceding four-year period. Beyond that, it will be followed by an OAR Index of Research Results, 1963 and, effective 1 January 1964, by an OAR Quarterly Index of Current Research Results. The latter will be prepared and published on a quarterly basis, with the last quarterly of each year containing an annual cumulative index.

The OAR Cumulative Index is divided into several parts beginning with a bibliography of the published results of both OAR-conducted and sponsored research for the four-year period. This bibliography is organized into sections by monitoring organizations. Within each section, the technical reports are arranged alpha-numerically according to the report number assigned by each organization. (These report numbers will show various prefixes reflecting changing organizational structures during the reporting period.) Each bibliographic entry includes the following information (if available and applicable): the report number; corporate author; title and date; the security classification (if classified); the name(s) of the author(s); the principal investigator (indicated by "P.I." if not one of the authors); the Defense Documentation Center accession (AD) number; the contract or grant number; and the project and task numbers. Several indexes follow the bibliography and are keyed to it by the report numbers. These are: an author index; a corporate-author index; a contract/grant number index; a project-number index; and a KWIC (Key-Words-In-Context) index of the report titles.

Every effort has been made to include all research results published during the years 1959-1962 (both in-house and contractor technical reports and journal articles) as well as other research products which are not technical reports per se but have resulted wholly or in part from OAR support (translations, monographs, symposia proceedings, state-of-the-art studies, reviews and textbooks). In compiling the bibliography, it was necessary to search old records, reports, and catalog cards maintained in varying degrees of completeness and accuracy by the different organizations. We do not presume to have found every report. Obviously, there are many omissions in the numerically listed report numbers. In most cases this is due to some numbers not having been utilized by a division or laboratory from preassigned blocks of numbers. Occasionally, also, a particular report was assigned a number but, for one reason or another, the report was never published. We do feel, however, that very few technical reports have been overlooked.

Any questions concerning this publication, or suggestions for improving subsequent indexes of research results, should be directed to the Office of Scientific and Technical Information (RRYC), Hq Office of Aerospace Research, USAF, 4th and Independence, S.W., Washington, D.C. 20333.
